Art Unit 235

1. Claims 1-15 are rejected under 35 U.S.C. § 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The following are given as examples.

Claim 1, line 21, it is unclear which selected time is being added, since the latch can store more than one time. Also in lines 43-46, insufficient structure and/or interconnections are set forth to allow the sector location pulse generation means to perform its desired function.

Claim 4, line 3, "the controller pulses" lacks an antecedent basis.

In claim 9, it is unclear as to what the accumulating step actually does i.e. what time or times are being accumulated. In line 15, "the accumulated time" and in lines 20-21 "the accumulation of next sector times" lacks a clear antecedent basis.

In claim 10, line 17, "the index mark" lacks an antecedent basis.

The other claims have problems similar to the examples given above.

2. Claims 2, 7, 9, 10, 13, and 15 are provisionally rejected under 35 U.S.C. § 101 as claiming the same invention as that of claims 2, 3, and 5-8 of copending application Serial No.

07/445,753. This is a *provisional* double patenting rejection since the conflicting claims have not in fact been patented.

For example compare claim 2 of this application to claim 3 of the parent application 07/445,753.

3. Claims 1 and 6 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1 and 4 of copending application Serial No. 07/445,753. Although the conflicting claims are not identical, they are not patentably distinct from each other because the claims are virtually identical. The more detailed recitations of the claims in the parent application 07/445,753 obviously include the broader recitations of the claims of this application.

This is a *provisional* obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

4. The obviousness-type double patenting rejection is a judicially established doctrine based upon public policy and is primarily intended to prevent prolongation of the patent term by prohibiting claims in a second patent not patentably distinct from claims in a first patent. *In re Vogel*, 164 USPQ 619 (CCPA 1970). A timely filed terminal disclaimer in compliance with 37 C.F.R. § 1.321(b) would overcome an actual or provisional rejection on this ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 C.F.R. § 1.78(d).

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

different numbers^{of}_A sectors on different areas of a disk. Both are also of interest in providing sector pulses, index pulses, counting sector pulses, etc.

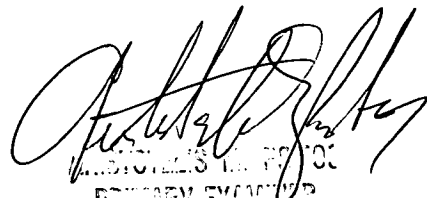

6. Claims 3-5, 8, 11, 12 and 14 would be allowable if rewritten to overcome the rejection under 35 U.S.C. § 112 and to include all of the limitations of the base claim and any intervening claims.
